

## NHAES Research Field Days for 2010

The NH Agricultural Experiment Station (NHAES) and College of Life Sciences and Agriculture (COLSA) at the University of New Hampshire will host two research field days this summer. The first will be at the Organic Dairy Research Farm and the second at Woodman Horticultural Farm. The purpose will be to highlight some of the research, teaching and extension activities being done at these facilities. Presentations and discussion will be provided by the farm managers, faculty and student researchers, Extension staff, and others. Suggested participants include agricultural producers and others having an interest in local agricultural research and outreach. We hope to engage with members of the UNH, local, state and regional communities.

The **Organic Dairy Research Farm** field day will be on **Monday August 2**, and at the **Woodman Farm** on **Thursday August 26**. Beverages and light snacks will be provided from 7:15 to 8:15. The programs will begin at 8:15 and end before noon. The events are free to all. Your participation is welcomed at this opportunity to visit with researchers, students and staff, and to explore these two excellent facilities. The NHAES is committed to equal opportunity for all stakeholders to access our programs, facilities, and information.

The ODRF is located at 216 Lee Hook Road in Lee, NH, and the Woodman Farm at 70 Spinney Lane on the west edge of the UNH campus. **Maps and directions** for each facility may be found on the NHAES website at <http://www.colsa.unh.edu/aes/directions.html>.

The NH Agricultural Experiment Station is housed within the College of Life Sciences and Agriculture at UNH, and supports research, teaching and extension related to sustainable agriculture and food systems, forestry and associated natural resources. The NHAES was established in 1887 as an integral part of the UNH land grant institution.

We look forward to seeing you there!
