

Managing Your Land for Wildlife

An Historical Overview and Strategies for Today

Saturday, October 15, 2011, 9 AM – 12:30 PM
Workshop at Muster Field Farm and other properties
in Sutton, NH – indoors and outdoors

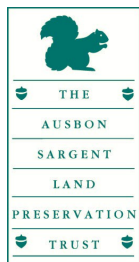

Join us for a workshop that introduces opportunities for landowners to provide important wildlife habitat components on their land. We'll begin with an indoor session introducing New Hampshire land use history and its impact on wildlife habitats and populations, then go outside to explore a wide variety of land types: forests and farm fields, wetlands and stream corridors, log landings and old fields. We'll discuss how to recognize important habitats and opportunities for habitat improvement on your property. Information about landowner assistance programs for wildlife habitat improvement will also be provided. Difficulty: easy to moderate – we will carpool from site to site with about ½ mile hike up a class 6 road and on a logging road to our last stop. Light refreshments will be provided.

Our workshop leaders are Matt Tarr, UNH Cooperative Extension Wildlife Educator with Tim Fleury, Merrimack County Forestry Educator

This workshop is free, but requires pre-registration by October 12, 2011.

To pre-register, provide your name and the names of all attendees in your party and contact information to Nancy Smith at Ausbon Sargent: aslptnancy@tds.net or 526-6555
