

MOTION COMMOTION

Training for 4-H Staff and Volunteers

September 2, 9:00-12:00

UNHCE Merrimack County Office and via Connect NH

Join us for a workshop to learn more about the 2015 4-H National Youth Science Day experiment Motion Commotion. This year's experiment explores the physics of motion and the factors that contribute to distracted driving. Leaders will explore the Motion Commotion activity, discuss the causes and implications of distracted driving, learn additional ways to explore the physics of motion and energy, and information about holding NYSD events in your county, with local 4-H clubs and afterschool programs.
