UNIVERSITY of NEW HAMPSHIRE  
COOPERATIVE EXTENSION

(No person shall be denied the opportunity to participate in this program because of inability to pay.)

Uneven-aged management - it can be tough to understand, and even tougher to implement in the field. Which trees should we keep, and which trees should we cut in each size class? What scale should we be looking at? How can we best achieve our objectives while preserving the fragile understory and the age class distribution when we re-enter the stand? We use the terminology, but are we really implementing uneven-aged management systems on the ground?

This may be the first time that you have thought about and talked about uneven-aged management as a unit since your silviculture class. In this workshop, we'll revisit some of the key factors that define it, and look at how it is being implemented in our major forest types.

## Implementing Uneven-aged Management in New England - Is It Practical?

June 22, 2006\* 8:00 am-4:00 pm

**\*This is a repeat of the April 13 workshop. Repeated due to popular demand.**
