

# APPENDIX C

## QUESTIONS TO ANSWER BEFORE THE FIELD VISIT: USING GIS OR OTHER ANALYTICAL TOOLS

(Remaining questions are answered during field checking)

Wetland scientists and other natural resources professionals use a variety of different analytical tools available to them. Among some of the more commonly used tools are:

- GRANIT Data Layers using ArcGIS, Autocad or similar software
- Terrain Navigator
- Google Earth
- GRANIT Data Mapper
- Stereoscopic Aerial Photos

### Record answers on the *NH Method* Data Sheets

Question #	Feature	Get answers using GIS or other Analytical tools
<b>1 - Ecological Integrity</b>		
<b>Question 1</b>	Sources of water quality degradation in the watershed	<ul style="list-style-type: none"> <li>● Use aerial photography and watersheds</li> <li>● Draw the watershed for the wetland being studied</li> <li>● Review the watershed together with the aerial photo to determine potential sources of contamination.</li> </ul>
<b>Question 7</b>	Road, railroad or driveway crossings	<p><b>From Printed Individual Wetland Map or Using GIS Or Other Analytical Tools</b></p> <ul style="list-style-type: none"> <li>● Identify road, railroad and driveway crossings that cross or come within 500 ft of the wetland.</li> <li>● Confirm road crossings with <i>field checking</i>.</li> </ul>
<b>Question 8</b>	Level of human activity in the <b>upland</b> within 500 feet of the wetland edge (land disturbance, clearing, logging, trails, roads, etc.)	<p>Use recent aerial photography as a background.</p> <ul style="list-style-type: none"> <li>● Demarcate a zone 500 ft from the wetland edge.</li> <li>● Determine any signs of human activity within 500 ft of the wetland, observable in the photo</li> <li>● Confirm with <i>field checking</i>.</li> </ul>
<b>Question 9</b>	Percent of impervious surface within 500 feet of the wetland edge	<ul style="list-style-type: none"> <li>● Using recent <b>Aerial Imagery</b> identify impervious surfaces within 500 ft. of the wetland.</li> <li>● Confirm impervious surfaces with <i>field checking</i>.</li> </ul>
<b>2 - Wetland-Dependent Wildlife Habitat</b>		
<b>Question 1</b>	Wetland size (acres)	<ul style="list-style-type: none"> <li>● Determine the size of the wetland using GIS resources (NWI, Hydric Soils, Aerial Photos) and <i>field checking</i>.</li> </ul>
<b>Question 4</b>	Area of shallow, permanent open water and streams (less than 6.6 ft deep)	<ul style="list-style-type: none"> <li>● Calculate the acreage of all PAB and PUB wetland vegetation classes.</li> <li>● Calculate stream acreage and add to acreage of PUB and PAB</li> <li>● Confirm with <i>field checking</i>.</li> </ul>
<b>Question 5</b>	Deepwater habitat associated with the wetland (lake, pond or river) deeper than 6.6ft.	<ul style="list-style-type: none"> <li>● Calculate the acreage of deepwater lakes and ponds.</li> <li>● Offline - Check the <a href="#">NH DES List of Fourth Order and Higher Streams</a> to identify any 4th order or higher streams. Estimate the length of the 4<sup>th</sup> order or higher stream associated with the wetland.</li> </ul>
<b>Question 6</b>	Wetland vegetation class diversity, including upland "islands" (NWI codes)	<ul style="list-style-type: none"> <li>● Identify wetland vegetation classes using NWI Maps and/or aerial photography.</li> <li>● Confirm with <i>field checking</i>.</li> </ul>

Question #	Feature	Get answers using GIS or other Analytical tools
Question 7	Other wetlands in close proximity to the study wetland	<ul style="list-style-type: none"> <li>Using <b>aerial photography</b> and <b>NWI wetlands/hydric soils</b>, determine distance to nearby wetlands from the study wetland.</li> <li>Confirm with <b>field checking</b>.</li> </ul>
Question 8	Wildlife access to other wetlands	<ul style="list-style-type: none"> <li>Use recent <b>Aerial Photo Imagery</b> and <b>NWI wetlands/hydric soils</b> to identify areas of apparently natural vegetation or undisturbed stream corridors between wetlands that could function as wildlife travel routes.</li> <li>Confirm with <b>field checking</b>.</li> </ul>
Question 9	Percent of wetland edge bordered by upland wildlife habitat	<ul style="list-style-type: none"> <li>Use recent <b>Aerial Imagery</b> to identify areas of apparently natural vegetation within 500 ft of the wetland edge.</li> <li>Calculate the percentage of the wetland edge bordered by undisturbed upland habitat.</li> <li>Confirm with <b>field checking</b>.</li> </ul>
<b>3 – Fish &amp; Aquatic Life Habitat</b>		
Question 1	Dominant land use in watershed	<ul style="list-style-type: none"> <li>Use recent <b>Aerial Imagery</b> together with recent <b>Land Cover</b> data to assess land use in the watershed of the wetland being studied.</li> <li>Confirm with <b>field checking</b>.</li> </ul>
Question 4	Acres of deepwater habitats (deeper than 6.6ft)	<ul style="list-style-type: none"> <li>Use aerial imagery and NWI data to calculate area of deepwater habitat (lakes and ponds classified as Lacustrine in NWI codes)</li> </ul>
Question 6	Does the stream channel appear to have been recently altered?	<ul style="list-style-type: none"> <li>Using recent <b>Aerial Imagery</b>, identify any stream sections that appear straightened</li> <li>Confirm with field checking.</li> </ul>
Question 11	Rare or endangered wildlife present?	<ul style="list-style-type: none"> <li>Review the <a href="#">NH Natural Heritage Bureau Town List</a> and select the town in question (listed in alphabetical order). See if any species that use wetlands are listed and determine their habitat type(s). Use this a guide for possible observations of rare species in those habitats.</li> </ul>
<b>4 – Scenic Quality</b>		
Question 2	Public Access	<ul style="list-style-type: none"> <li>Use the <b>Conservation &amp; Public Lands</b> data layer to determine if the wetland is on a property that has public access (public land). Public access is not specifically indicated in the Conservation &amp; Public Lands data, so this may require further research to determine access for some conservation properties. This might include checking deeds and asking the town Conservation Commission).</li> <li>Confirm this information with <b>field checking</b>.</li> </ul>
Question 4	Open water visible	<ul style="list-style-type: none"> <li>Calculate acreage of all PAB and PUB wetland vegetation classes and any pond or lake acreage. Calculate the size of large open river areas. The question is broad: Is the open water area less than one acre, more than three acres, or somewhere in between?</li> <li>Confirm with <b>field checking</b>.</li> </ul>
<b>5 – Educational Potential</b>		
Question 4	Public or private property with public access	<ul style="list-style-type: none"> <li>Use the <b>Conservation &amp; Public Lands</b> data layer together with the <b>Wetlands</b> data layer to determine if the wetland is on a property that has public access. Public access is not specifically indicated in the <b>GRANIT Data Mapper</b> so this may require checking with the town (Conservation Commission). Confirm with <b>field checking</b>.</li> </ul>
Question 6	Number and accessibility of wetland classes accessible or potentially accessible at educational site	<ul style="list-style-type: none"> <li>Same instructions as <b>2 – Wetland-Dependent Wildlife Habitat</b>, Question 6. Determine if the number of vegetation classes are accessible at the education site.</li> <li>Confirm this information with <b>field checking</b>.</li> </ul>

Question #	Feature	Get answers using GIS or other Analytical tools
<b>6 – Wetland-based recreation - NO GIS or Other DATA NEEDED</b>		
<b>7 – Flood Storage</b>		
<b>Question 1</b>	Wetland acres, not including upland “islands”.	<ul style="list-style-type: none"> <li>Calculate Wetland acreage, excluding the area of any upland island. If there are any upland islands/inclusions in the wetland area, you will need to subtract the acreage of the upland from the total wetland acreage and use this adjusted acreage in this calculation.</li> </ul>
<b>Question 2</b>	Watershed acres	<ul style="list-style-type: none"> <li>Using the <b>topographic map</b> and GIS or Other tools, draw the watershed boundary and calculate acreage.</li> </ul>
<b>Question 7</b>	Location within the watershed	<ul style="list-style-type: none"> <li>Determine the location of the wetland in relation to a perennial/4<sup>th</sup> order stream (refer to Section 3, Figure 3).</li> <li>To determine stream order, see: <ul style="list-style-type: none"> <li><a href="#">NH DES List of Fourth Order and Higher Streams</a></li> <li><a href="#">NH Statewide Map Atlas “Fourth Order and Higher Streams</a></li> </ul> </li> </ul>
<b>8 – Groundwater Recharge</b>		
<b>Question 1</b>	Does the wetland overlie stratified drift aquifer?	<ul style="list-style-type: none"> <li>View the <b>Aquifer Data Layer</b> and determine if the wetland overlies stratified drift aquifer</li> </ul>
<b>Question 2</b>	Is the wetland in a potential public water supply area?	<p><b>Use GIS or Other Analytical Tools or use the Forest Society Website for <a href="#">Favorable Gravel Well Analysis</a>:</b></p> <ul style="list-style-type: none"> <li>Using the Favorable Gravel Well maps available on GRANIT or via the Forest Society web page, locate the wetland area.</li> <li>Determine if the wetland overlies or is immediately adjacent to a Favorable Gravel Well area.</li> </ul>
<b>Question 3</b>	Is the wetland within a public wellhead protection area?	<ul style="list-style-type: none"> <li>Determine if the wetland is within a public wellhead protection area. To get the GIS data for wellhead protection areas, contact Pierce Rigrod, NH DES Drinking Water and Groundwater Bureau, at pierce.rigrod@des.nh.gov or 603-271-0688.)</li> </ul>
<b>Question 4</b>	Percent coverage of highly permeable soils <b>within 100 ft</b> of the wetland	<ul style="list-style-type: none"> <li>Using the <b>Soils Data Layer</b> with soil polygons visually determine the percent cover of highly permeable soils within 100 ft of the wetland.</li> </ul>
<b>Question 5</b>	Percent coverage of the highly permeable soil types <b>within the wetland</b>	<ul style="list-style-type: none"> <li>Using the <b>Soils Data Layer</b> with all soil polygons visually determine the percent cover of highly permeable soils within the wetland itself.</li> <li>Determine if the dominate soils types are on the list in Table 4 in Section 3 in the NH Method,</li> </ul>
<b>9 - Sediment Trapping</b>		
<b>Question 2</b>	Character of outlet	<ul style="list-style-type: none"> <li>Use the <b>DRG Topographic</b> data layer to locate any outlet/s (or lack thereof).</li> <li>Confirm type of outlet and restriction, if any, with <b>field checking</b>.</li> </ul>
<b>Question 3</b>	Character of water flow through the wetland	<ul style="list-style-type: none"> <li>Using recent <b>Aerial Photography and stream lines</b>, determine shape of the stream channel in the wetland</li> <li>Confirm with field observation.</li> </ul>
<b>Question 5</b>	Gradient of Wetland	<ul style="list-style-type: none"> <li>Using GIS, determine the highest and lowest elevation of the wetland along its longest axis. Subtract the two elevations to get the elevation difference.</li> </ul>
<b>Question 6</b>	Percentage cover of persistent, sediment trapping vegetation in the wetland	<ul style="list-style-type: none"> <li>Identify NWI wetland classes and determine the wetland vegetation classes (PFO, PSS, PEM) with the most acreage. Add the acreage of these types. Confirm with <b>field checking</b>.</li> </ul>
<b>10 - Nutrient Trapping/Retention/Transformation – NO DATA NEEDED FROM GRANIT DATA MAPPER</b>		
<b>Question 3</b>	Percent cover of wetland vegetation classes	<ul style="list-style-type: none"> <li>Same directions as <b>9 - Sediment Trapping</b>, Question 6 above. Transfer your answer.</li> <li>Confirm this information with <b>field checking</b>.</li> </ul>

Question #	Feature	Get answers using GIS or other Analytical tools
Question 4	Hydroperiod of wetland	<ul style="list-style-type: none"> <li>Using the NWI data layers, determine the hydroperiod codes for the NWI polygons.</li> <li>Determine which hydrologic regime dominates the wetland (&gt; 50% of NWI polygon's acreage).</li> <li>Confirm this information with <b>field checking</b>.</li> </ul>
Question 5	Wetland soils	<ul style="list-style-type: none"> <li>Use the <b>Hydric Soils</b> layer to determine the acreage of each hydric soil polygon.</li> <li>Using <b>Appendix D in the NH Method</b>, determine whether the wetland is dominated (&gt;50%) by fine textured soils, organic soils, or sands &amp; gravels.</li> </ul>
<b>11 - Shoreline Anchoring</b>		
Question 1	Gradation of vegetation types	<ul style="list-style-type: none"> <li>Same instructions as for Section 2, Wetland-Dependent Wildlife Habitat, Question 9. Determine the number of wetland classes <i>along the shoreline</i>.</li> </ul>
Question 3	How wide is the wetland bordering the watercourse, lake or pond?	<ul style="list-style-type: none"> <li>Using aerial photography and the wetland boundary, calculate the average wetland width</li> <li>Confirm this information with <b>field checking</b>.</li> </ul>
<b>12. Noteworthiness</b>		
Question 1	Is wetland within 500 ft. of Highest Ranked Habitat?	<ul style="list-style-type: none"> <li>Using the <b>Wildlife Action Plan Highest Ranked Habitat</b> data, identify any highest ranked habitat (statewide significance – pink; or regional significance – green) that appears in or near the wetland.</li> </ul>
Question 6	Connection to a state designated river?	<p>Refer to the list of rivers in <a href="#">New Hampshire Rivers Management and Protection Program</a> and <a href="#">National Wild and Scenic Rivers Program</a></p> <p><b>Using GIS or Other Analytical Tools:</b></p> <ul style="list-style-type: none"> <li>Determine distance to the nearest state designated river, if applicable.</li> </ul>
Question 7	Is the wetland one of just a few left in an urban setting	<ul style="list-style-type: none"> <li>Use the land use an aerial photo data layers to determine the significance of the wetland in an urban setting. Is it one of just a few left?</li> </ul>
