

INVASIVE

ASIAN LONGHORNED BEETLE

The Asian longhorned beetle is shiny black, with bright white irregular spots, but lacks the one small white spot found on the white-spotted sawyer.

NATIVE

WHITE-SPOTTED SAWYER BEETLE

The white-spotted sawyer beetle is native to this region and feeds on dead and dying pine trees, not live hardwoods. It has a small white spot where the two wing pads come together. Some have white blotches and others are mostly blackish.
