

WATER, WEATHER, CLIMATE AND COMMUNITY WORKSHOP SERIES

As Sea Level Rises, Groundwater Does Too: What is at Risk When Groundwater Rises?

Strawbery Banke Museum and ClearEye Photography

When	THURSDAY, APRIL 26, 2018, 5:00 – 7:45 pm (light dinner provided 5:00-5:30 pm)
Where	Hugh Gregg Coastal Conservation Center, 89 Depot Road, Greenland, NH 03840
Who	Municipal staff, board and commission members, public works staff, emergency management personnel, coastal community members, consultants, engineers, the NH Coastal Risk and Hazards Commission, state representatives, and state agencies

REGISTER ONLINE

Workshop is FREE, but space is limited. Registration deadline: 5:00 pm, Monday, April 23, 2018.

Questions? Email Sherry.Godlewski@des.nh.gov or call 603-271-6801.

Join us for an evening with local researchers and community representatives to discuss how coastal groundwater will rise with sea level, and the impacts to water quality, infrastructure, and ecosystem health. Speakers include Jayne Knott and Dr. Jennifer Jacobs (UNH and the Infrastructure and Climate Network (ICNet)), Kyle Pimental (Strafford Regional Planning Commission), and Dale Pike (Newmarket Town Council).

What to expect:

- Learn from local experts where groundwater is expected to rise and by how much.
- Discuss how communities may be affected and what can be done to prepare.
- Discuss how properties that currently have groundwater problems may see these problems get worse.
- Share your knowledge and experiences. We want to hear from YOU.
