GREAT EAST LAKE 2017 WATER QUALITY REPORT 1 CENTER

SITE STATUS SUMMARY OF CONDITIONS **WATER CLARITY** TROPHIC STATE **OLIGOTROPHIC** 11.0 At site 1 Center, water quality is generally excellent. Increasing water clarity and decreasing chlorophyll **TOTAL PHOSPHORUS** 4.4 concentrations show improving water quality. CHLOROPHYLL A 0.7 **CURRENT** good excellent poor **DISSOLVED OXYGEN** 8.4 TREND degrading improving flat too few data **SITE RESULTS** ANNUAL WATER QUALITY PATTERNS

5 THE RESULTS ANNUAL WATER QUALITY PATTERNS

LAKE BASICS BACKGROUND INFO

Site Depth 1 Center – 102 feet Lake Max/Mean Depth 102 feet / 35 feet

ocation Wakefield, NH & Acton, ME

Watershed Area 15.5 square miles

Lake Area 1,707 acres
Shore Length 18.7 miles

Lake Volume 75.6 million cubic meters

Flushing Rate 0.3 times per year

Lake Elevation 573 feet

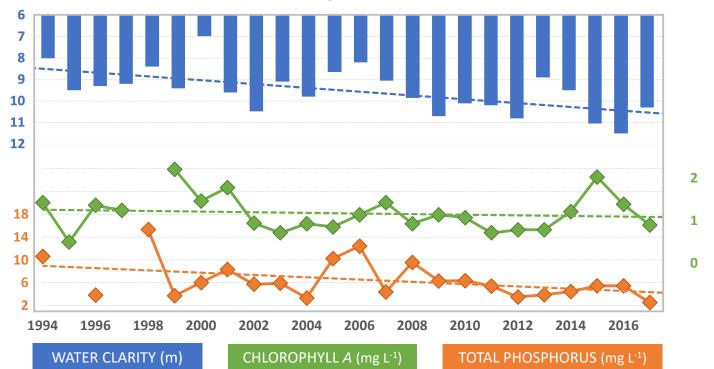

GREAT EAST LAKE 2017

WATER QUALITY REPORT 2 CANAL BASIN

SITE STATUS SUMMARY OF CONDITIONS **WATER CLARITY** TROPHIC STATE **OLIGOTROPHIC** 10.0 At site 2 Canal Basin, water quality is generally excellent. Increasing water clarity and decreasing phosphorus **TOTAL PHOSPHORUS** 3.2 concentration shows improving water quality. CHLOROPHYLL A 0.9 **CURRENT** good excellent poor **DISSOLVED OXYGEN** 8.7 TREND degrading improving flat too few data

SITE RESULTS ANNUAL WATER QUALITY PATTERNS

LAKE BASICS BACKGROUND INFO

Site Depth 2 Canal Basin – 60 feet Lake Max/Mean Depth 102 feet / 35 feet

ocation Wakefield, NH & Acton, ME

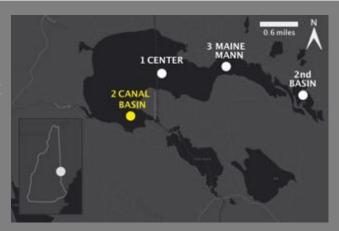

Watershed Area 15.5 square miles

Lake Area 1,707 acres
Shore Length 18.7 miles

Lake Volume 75.6 million cubic meters

Flushing Rate 0.3 times per year

Lake Elevation 573 feet

GREAT EAST LAKE 2017

WATER QUALITY REPORT 3 MAINE MANN

SITE STATUS SUMMARY OF CONDITIONS **WATER CLARITY TROPHIC STATE OLIGOTROPHIC** 9.4 At site 3 Maine Mann, water quality is generally excellent. Increasing water clarity and decreasing **TOTAL PHOSPHORUS** 3.5 chlorophyll concentration shows improving water quality. CHLOROPHYLL A 0.9 **CURRENT** good excellent poor **DISSOLVED OXYGEN** TREND degrading improving flat too few data

SITE RESULTS ANNUAL WATER QUALITY PATTERNS 7 8 9 10 3 2 1 10 0 6 1993 2001 2005 2007 2009 2013 2015 1995 1997 1999 2003 2011 2017 CHLOROPHYLL A (mg L-1) WATER CLARITY (m) TOTAL PHOSPHORUS (mg L⁻¹)

LAKE BASICS BACKGROUND INFO

Site Depth 3 Maine Mann – 34 feet

Lake Max/Mean Depth 102 feet / 35 feet

Wakefield, NH & Acton, ME

15.5 square miles

Watershed Area

Lake Area 1,707 acres 18.7 miles **Shore Length**

Lake Volume 75.6 million cubic meters

Flushing Rate 0.3 times per year

573 feet **Lake Elevation**

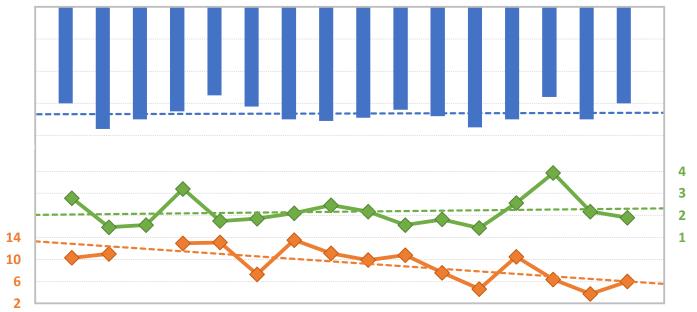

GREAT EAST LAKE 2017

WATER QUALITY REPORT 2nd BASIN

SITE STATUS SUMMARY OF CONDITIONS TROPHIC STATE **OLIGOTROPHIC WATER CLARITY** 5.2 At site 2nd Basin, water quality is generally excellent. Phosphorus concentrations are trending downward and **TOTAL PHOSPHORUS** 7.2 water clarity is steady, but increasing chlorophyll concentrations may indicate other factors are driving algal growth. CHLOROPHYLL A 2.0 CURRENT good excellent poor **DISSOLVED OXYGEN** TREND degrading improving flat too few data

SITE RESULTS ANNUAL WATER QUALITY PATTERNS

2001 2002 2003 2004 2005 2006 2007 2008 2009 2010 2011 2012 2013 2014 2015 2016 2017 2018

WATER CLARITY (m)

CHLOROPHYLL A (mg L⁻¹)

TOTAL PHOSPHORUS (mg L⁻¹)

LAKE BASICS BACKGROUND INFO

Site Depth 2nd Basin— 20 feet Lake Max/Mean Depth 102 feet / 35 feet

wakefield, NH & Acton, ME

Watershed Area 15.5 square miles

Lake Area 1,707 acres Shore Length 18.7 miles

ake Volume 75.6 million cubic meters

Flushing Rate 0.3 times per year

Lake Elevation 573 feet

GREAT EAST LAKE 2017 LAKE STATUS AND FUTURE CONCERNS

PHOSPHORUS and CHLOROPHYLL A are likely higher in 2nd Basin as a result of a lower flushing rate

CYANOBACTERIA are found at times in the lake – *Gloeotrichia* has been found in the main lake, while 2nd Basin has experienced occasional blooms of *Anabaena*.

INVASIVES were found and removed from Great East in 2006 (variable milfoil) and have not returned. Great East has an active **LAKE HOST** program to prevent future infestations

WATERSHED RESTORATION EFFORTS by the Acton Wakefield Watersheds Alliance began in 2008 to help improve water quality. Work will be ongoing to achieve water quality goals.

Great East Lake is part of the Salmon Falls Headwater Lakes Watershed MANAGEMENT PLAN

WATER QUALITY REVIEW

LEARN MORE ABOUT LAKE HEALTH

LAKE PRODUCTIVITY is determined by multiple factors, including

WATER CLARITY Water clarity is used as an indirect measure of algal productivity, but is also influenced by suspended sediments and dissolved color.

CHLOROPHYLL A green pigment found in plants and algae, it is used to estimate algal biomass. Algal growth is promoted by phosphorus, increasing chlorophyll.

PHOSPHORUS A key nutrient that stimulates algal blooms and excessive plant growth, particularly for invasive species.

DISSOLVED OXYGEN Low dissolved oxygen can kill or stress organisms and release phosphorus from sediments, further degrading water quality.

LAKE TROPHIC STATE is generally broken into three categories

OLIGOTROPHIC

DEEP

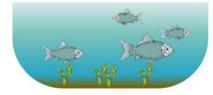

LOW

LOW

HIGH THROUGHOUT WATER COLUMN

MINIMAL PLANTS

MESOTROPHIC

REDUCED

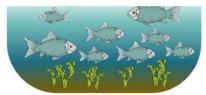

MODERATE

MODERATE

OCCASIONALLY LOW IN BOTTOM WATERS

MODERATE PLANTS

EUTROPHIC

SHALLOW

HIGH

HIGH

FREQUENTLY LOW IN BOTTOM WATERS

ABUNDANT PLANTS

LAKE AGING is both natural and accelerated by human activities

Lakes **NATURALLY** age or become more productive over thousands of years. In recent geologic time, humans have enhanced the rate of nutrient enrichment and lake productivity, speeding up this natural process to tens or hundreds of years.

HUMANS introduce excess phosphorus enters the lake in eroding sediment, groundwater (e.g. aging septic systems), or stormwater runoff, which contains fertilizers, detergents, or other phosphorus-based products. Algal blooms and uncontrolled sediment erosion along the shoreline can decrease water clarity, which can reduce shoreline property values.
