
A close-up photograph of a hemlock branch. The branch is covered in green, needle-like leaves. Several small, white, woolly masses are visible, which are Hemlock Woolly Adelgid insects. The background is a blurred green, suggesting more foliage.

Please look for this pest...Hemlock Woolly Adelgid

Host: Hemlock

Look For: 1/16"-1/4" white woolly masses where needles attach to twigs

If you think you've found it, **REPORT IT!** (see other side)

Please look for this pest...Elongate Hemlock Scale

Host: Hemlock, Fir, other conifers

Look For: waxy yellow-brown scale & white wool on the backs of needles

If you think you've found it, **REPORT IT!** Note the location, take a photo, and call your state department of forestry or agriculture:
VT: (802) 241-3606 NH: (603) 464-3016 ME: (207) 287-2431
