

Best Management Practices for Proper Handling of Wood Infested by Emerald Ash Borer

Sep 9, 2014

Rack Card Available

A new rack card is available on www.NHBugs.org with best management practices for handling and moving emerald ash borer (EAB) infested wood within quarantine areas. While there are certain [legal requirements](#) for handling and moving EAB-infested wood, responsible people can also take simple steps to help slow the spread of EAB.

One step we can all take is to cut and season ash at its place of origin for 12 months before distribution, and a second step is to deliver ash wood within 5 miles of its origin. Review [the rack card](#) to read all the steps for proper handling of infested wood.

For up-to-date information about emerald ash borer in New Hampshire, visit www.NHBugs.org and sign up to receive bug updates through email.
